PROFESSIONAL SUMMARY

Result-oriented professional with 3+ years of experience in optimizing cloud infrastructure and automating deployment processes. Proven success in enhancing scalability, improving system security by 35%, and streamlining operations for Linux-based environments. Proficient in managing CI/CD pipelines, container orchestration with Kubernetes, and infrastructure provisioning using Terraform and AWS.

EXPERIENCE

DevOps Engineer: Capgemini	Feb 2025 – Present
- Designed AWS infrastructure, maintaining 99.9% uptime, improving scalability by 40%, and enhancing security compliance by 35% across projects - Simplified Linux-based systems operations, deploying scripts that reduced manual intervention by 30% for RHEL, CentOS, and AWS Linux environments - Developed multi-container deployment strategies with Kubernetes and Helm, increasing configuration management efficiency and enhancing system scalability - Optimized infrastructure provisioning using Terraform, leading to a 20% reduction in deployment times and improving overall infrastructure management efficiency - Accelerated code deployments by 40% by implementing Jenkins CI/CD pipelines, ensuring continuous integration and faster software releases - Automated microservices based application pipelines using Jenkins and GitHub, reducing deployment failures by 20% and increasing overall deployment success rates	

CORE COMPETENCIES

• Linux	• Maven	• Terraform	• Security Groups	• Prometheus
• Ansible	• NPM	• Nexus	• CloudWatch	• Grafana
• Redshift	• pip	• Git/GitHub	• EKS	• SonarQube
• MySQL	• Jenkins CI/CD	• Yaml	• Docker	
• Redis	• GitHub actions	• AWS	• Kubernetes	

PROJECTS

Telia Company, Capgemini	Feb 2025 – Present
- Configured and managed AWS services including EC2, AMI, S3, ELB, RDS, VPC, and CloudWatch to support secure and scalable infrastructure. - Provisioned and automated AWS infrastructure using reusable Terraform and Ansible modules, ensuring consistency across multiple environments. - Administered Linux servers (Ubuntu and RHEL) through Ansible playbooks, streamlining server configuration and patch management. - Implemented CI/CD pipelines with Jenkins and GitHub Actions to automate build, test, and deployment processes. - Managed artifacts using JFrog Artifactory, ensuring secure and version-controlled storage of application binaries. - Performed application security scans using SonarQube for SAST, Veracode for DAST, and GitHub Depend Bot to strengthen application security. - Developed Docker files, built container images, and published them to Amazon ECR and JFrog Registry for consistent deployments. - Deployed and managed applications on Kubernetes to enable scalability, resilience, and high availability. - Created AWS Managed Grafana dashboards and integrated Datadog monitoring to improve system observability and incident response. - Generated AWS cost reports service-wise and environment-wise, presented findings to stakeholders, and recommended optimizations for cost efficiency. - Onboarded AI/ML use cases including LLMs using Python scripts, automating workflows and enabling advanced experimentation. - Provisioned and managed Amazon Redshift clusters declaratively, supporting modifications, additions, and deletions based on user requirements. - Configured alerting mechanisms via email and Slack for infrastructure and application failures, ensuring quick incident response.	

- Collaborated with development teams to integrate GitHub as a version control system, applying merge strategies for controlled deployments.
- Established proactive monitoring and alerting through CloudWatch, Datadog, and Slack channels to maintain application reliability.
- Enhanced deployment reliability by integrating containerized applications with Kubernetes and automating releases through CI/CD pipelines.

Met online, Dxc Technology

21-Jan 2022 – 04-Jun 2024

- Designed and implemented AWS infrastructure solutions for various projects, ensuring high availability, improved scalability, and enhanced security compliance.
- Optimized Linux-based systems operations by deploying automation scripts for Red Hat Enterprise Linux (RHEL), CentOS, and AWS Linux, reducing the need for manual interventions.
- Created shell scripts to automate routine tasks, significantly improving operational efficiency and consistency.
- Developed and executed deployment strategies for multi-container applications using Kubernetes and Helm, streamlining configuration management and enabling the team to handle increased deployment requests effectively.
- Designed YAML-based deployment processes to establish consistent and repeatable multi-tier application environments.
- Enhanced infrastructure provisioning processes with Terraform, improving deployment speed and reliability.
- Automated system and application deployments using Ansible playbooks, ensuring seamless and error-free operations.
- Built and implemented CI/CD pipelines with Jenkins, streamlining code deployments and improving delivery efficiency.
- Established CI/CD workflow best practices by collaborating with cross-functional teams, leading to increased system reliability and performance.
- Architected a multi-environment application strategy using Docker containers, enabling seamless deployment across both cloud and local environments and supporting adoption by multiple development teams.
- Developed deployment pipelines with Jenkins and GitHub for microservices-based applications, reducing deployment errors and enhancing reliability.
- Designed a robust monitoring framework with Prometheus and Grafana, creating customized dashboards for real-time analytics and improving incident response efficiency.
- Managed repository workflows in GitHub, automating review processes to support seamless collaboration.
- Created threshold-based alerts integrated with monitoring tools to proactively identify and resolve system issues.
- Resolved complex cloud infrastructure challenges, enhancing system availability and operational stability.

BHF IA Combiner

05-Jan 2024 – 04-Jun 2024

- Executed a migration to an enhanced build system leveraging Jenkins and Docker, significantly improving development team productivity by automating deployment tasks.
- Streamlined the build process by integrating automated testing protocols within Jenkins, reducing post-deployment issues and enhancing overall system reliability.
- Monitored build processes and implemented alert mechanisms for build failures, enabling faster issue resolution and improving overall team productivity.
- Deployed a suite of applications across multiple environments, ensuring consistent performance and reducing support tickets related to application reliability.
- Optimized infrastructure using Terraform, accelerating deployment workflows and enhancing operational efficiency.
- Administered AWS resources, including EC2 Instances, S3, Auto Scaling, and ELB, configuring essential services to support application requirements.
- Managed Nexus as a mirrored repository for builds, facilitating efficient artifact management and distribution.
- Integrated SonarQube into CI/CD pipelines to automate code quality checks and enforce adherence to coding standards.
- Built and managed Docker containers using custom images, with expertise in writing Docker files and configuring Docker environments.
- Utilized Docker and Kubernetes to manage microservices, streamlining continuous integration and delivery pipelines.

EDUCATION

CREC College

Jun 2018 – Jul 2021

Bachelor of Technology in Electrical and Electronics Engineering

CERTIFICATIONS

- AWS Certified Solutions Architect – Associate

Jun 2023
